

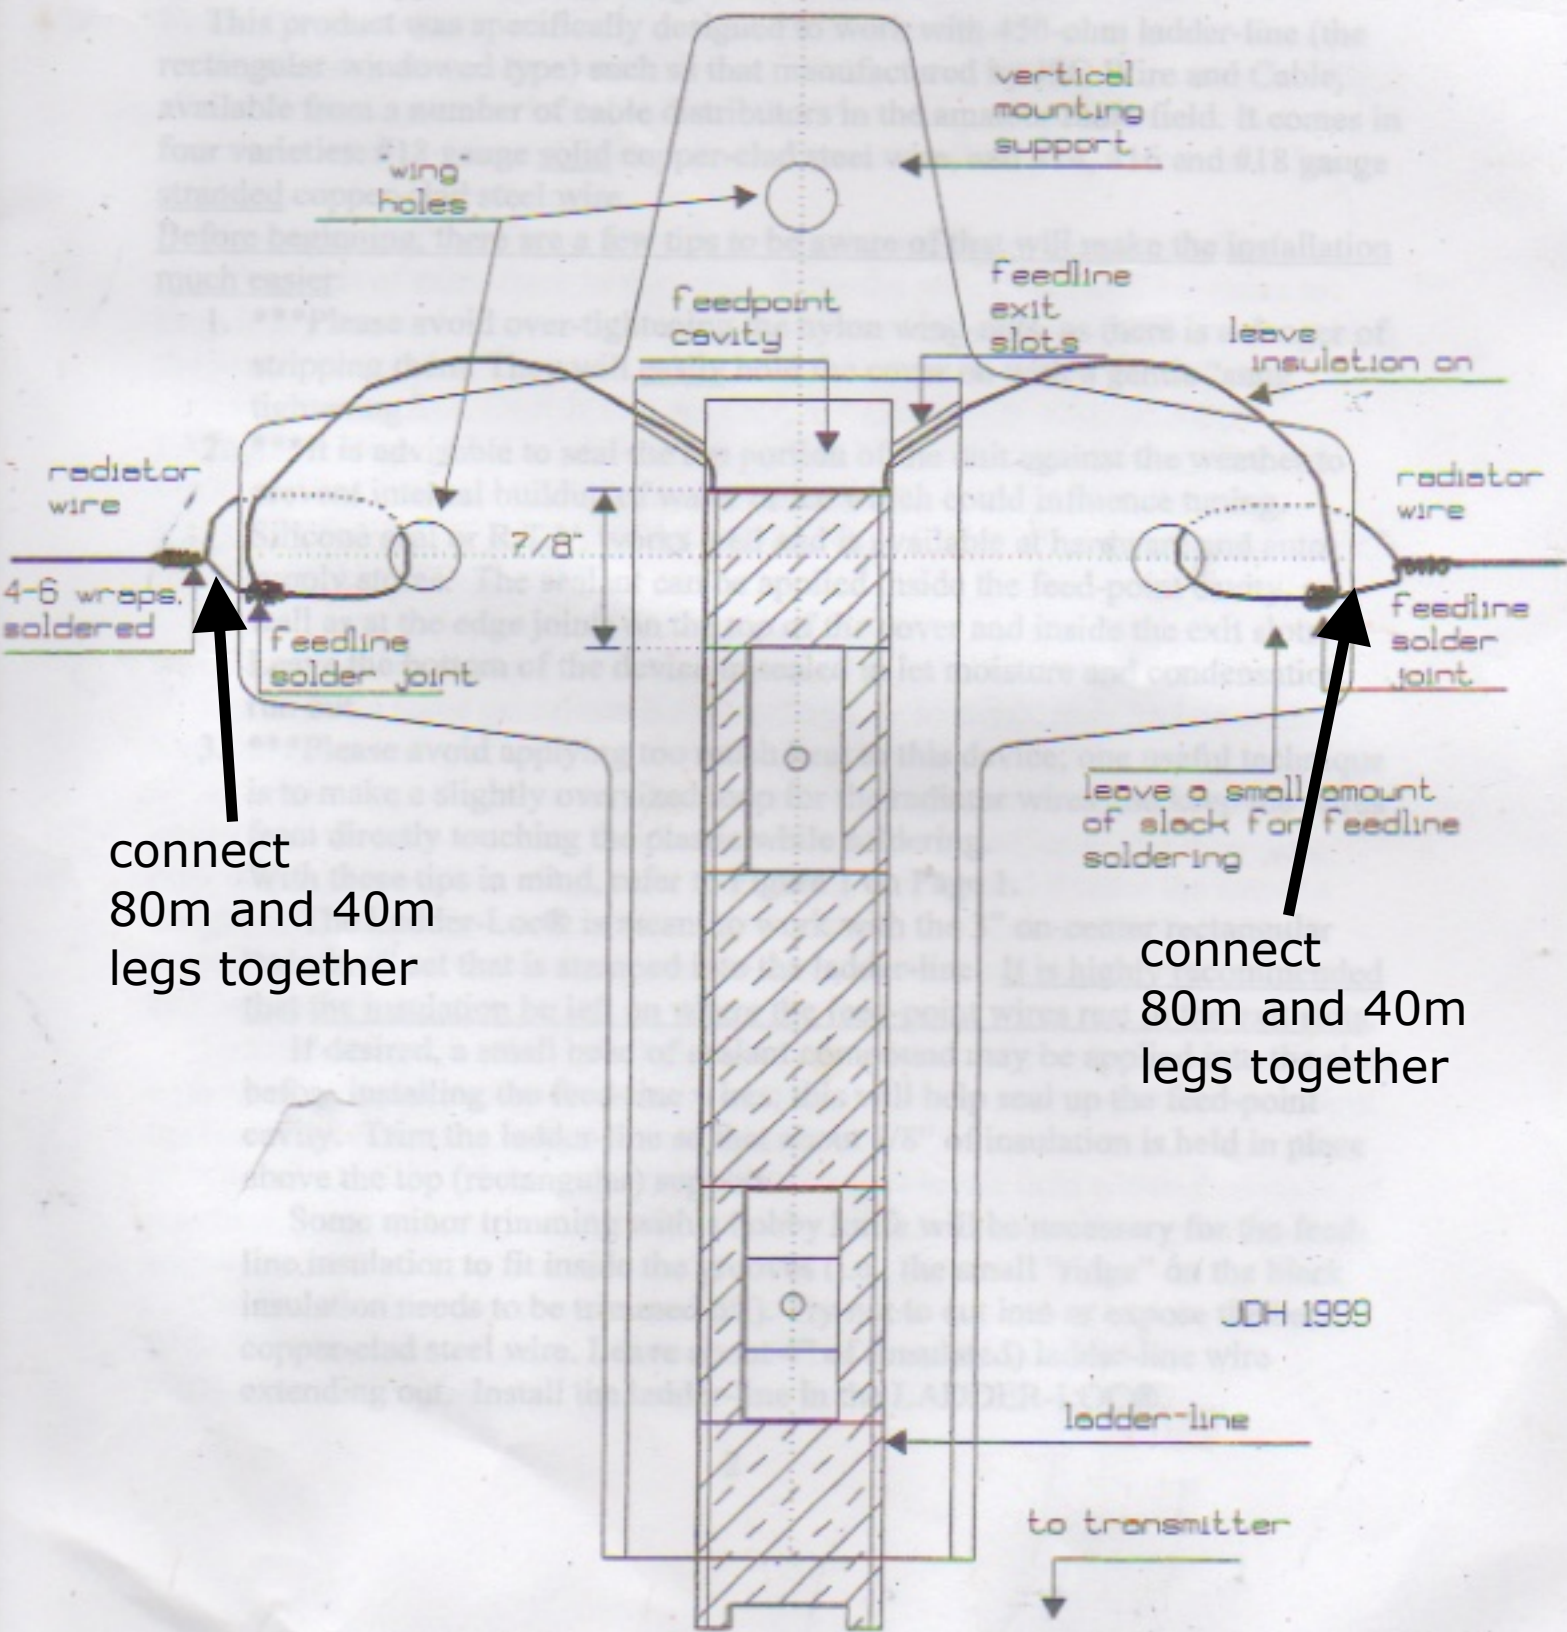

Figure 1. Assembly Detail

Thank you to the ladder-line user a custom-molded platform with a built-in strain relief and radiator wire supports for mounting wire antennas.

This product was specifically designed for use with 40m ladder-line (the rectangular windowed type) which is that manufactured by Vertical Mounting Support and Cable, available from a number of cable distributors in the U.S. It comes in four varieties: solid copper wire, stranded copper wire, and #18 gauge stainless steel wire. Before beginning the assembly, please read the instructions which will make the installation much easier.

1. ***Please avoid over-tightening the feedpoint cavity. The feedpoint cavity is designed to hold the ladder-line against the weatherstripping. The weatherstripping is built into the feedpoint cavity and will influence the feedpoint. The weatherstripping is built into the feedpoint cavity and will influence the feedpoint. The weatherstripping is built into the feedpoint cavity and will influence the feedpoint.
